

Adobe Illustrator for Vector artwork

DEMO

- **Clipping Mask:** Locked the forest image inside the text shape so it only shows within the letters, keeping full image quality.
- **Vector + Raster:** Combined vector text with a raster image, showing understanding of both formats.
- **Editable Outlines:** Converted text to outlines so the design won't break if opened without the font installed.
- **Non-Destructive Editing:** The image isn't deleted or cropped permanently — it can be repositioned anytime.
- **Real-world Use:** This technique is common in branding, posters, and eco-campaign designs.
