

■ Solana Web3.js — Demo Report

Anchor Framework | Smart Contract | Devnet Deployment

Nuzm Solutions | Prototyping Group | 2026

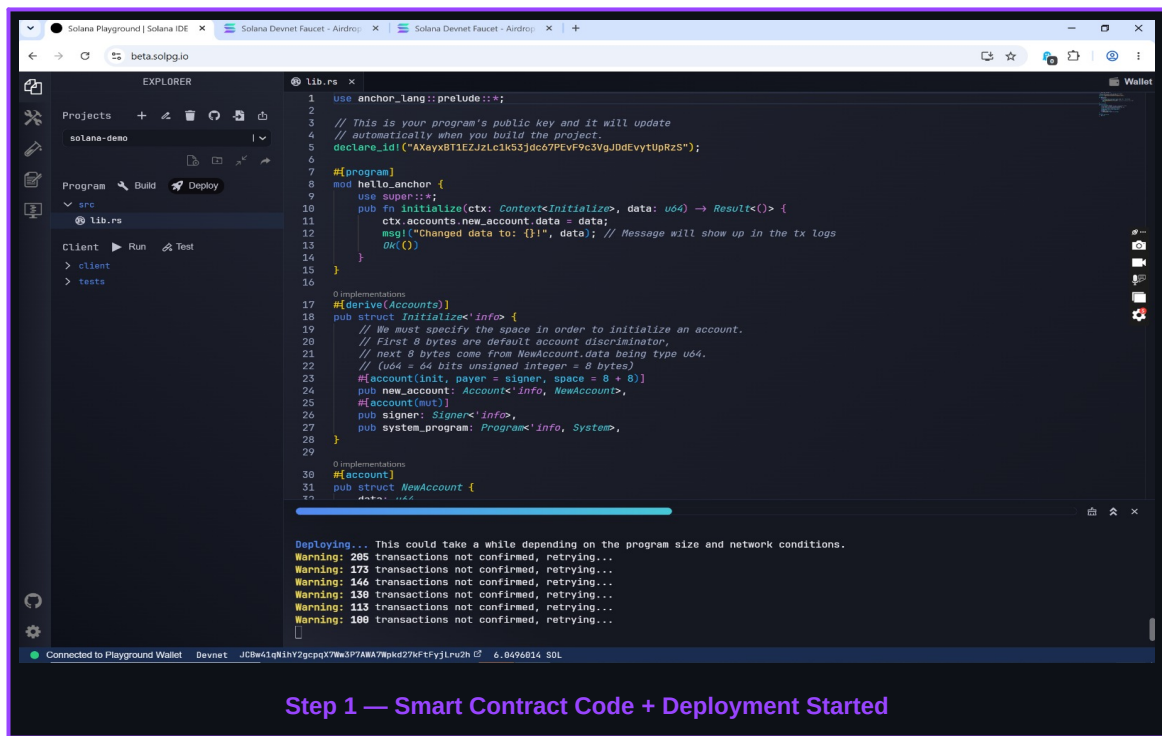

About Solana Web3.js

Solana Web3.js is a JavaScript/TypeScript library for interacting with the Solana blockchain. This demo uses the Anchor framework to build and deploy a smart contract on Solana Devnet using Solana Playground IDE — a browser-based development environment. The contract was successfully built, deployed and executed on the Solana blockchain with real SOL balance and transactions.

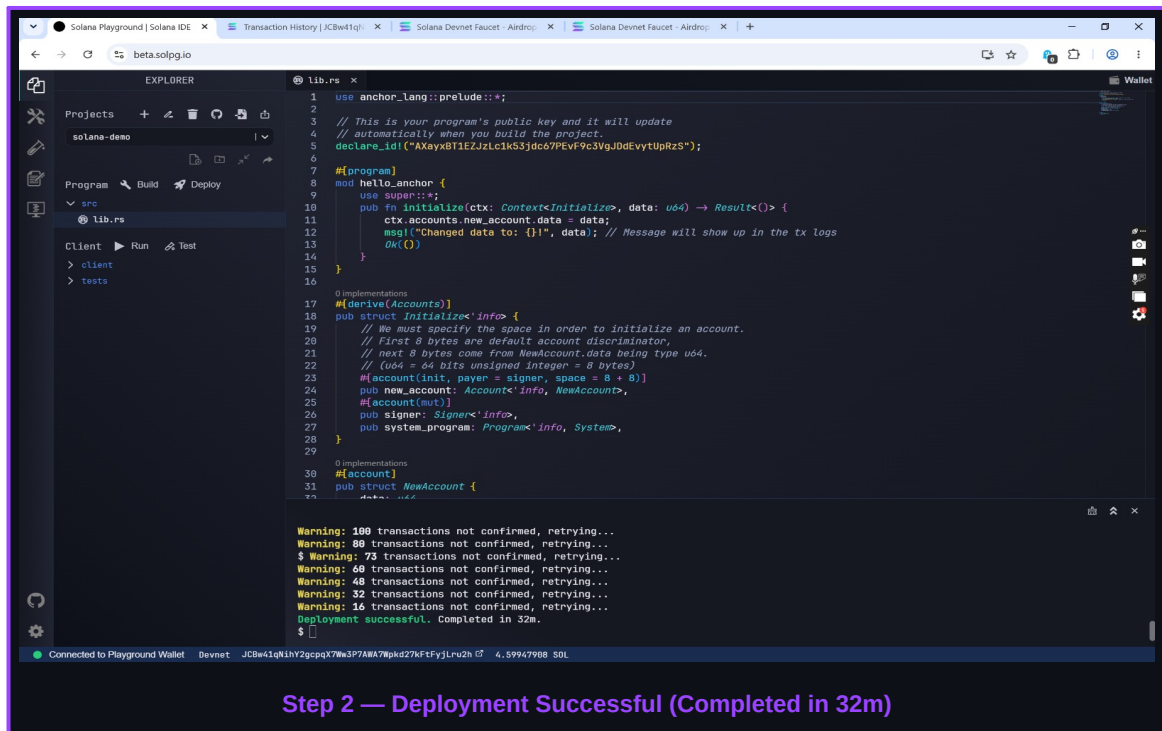

Technologies Used

Technology	Details
Solana Web3.js	JavaScript library for Solana blockchain interaction
Anchor Framework	Smart contract development framework for Solana
Rust Language	Smart contract written in Rust (lib.rs)
Solana Playground	Browser-based Solana IDE (beta.solpg.io)
Devnet	Solana test network for development
SOL Balance	4.59947908 SOL on Devnet wallet
