

Autodesk FUSION DEMO

3D EARPHONE DESIGN

HERO RENDER:

Design Overview:

This model was designed using Fusion 360's Sculpt environment, creating a smooth, curved 90-degree elbow tube through T-Spline surface modeling. Unlike traditional sketch-based extrusion, T-Splines allow organic, seamless curves and freeform surface control. The model was finished with a brushed metal material and rendered under studio lighting to achieve a realistic, professional product visualization.

Key points:

- Used the **Sculpt tool** freeform organic modeling (completely different from gears/case, which used extrude/pattern)
- The grid of lines visible on the surface is the **T-Spline control cage**, used to shape smooth transitions
- Applied **metallic material + rendering** gives it a polished, product-design look
